

Install firmware - Tag proximity

1. install mplab x ide & ide
2. make a project in ide env. add source and header files.
3. fix the */ in all files
4. add the main.c as default source file not the main-ISI-original.c as mentioned in Makefile
5. Add define `_LEGACY_HEADERS` in config.h to resolve `OPTION_REG = CONFIG_CPU_OPTION`. but problem didn't resolve. so commented out to make progress.
